

THE PHYSICS OF HOMEOPATHY

Claudio Cardella

Scuola di Ingegneria Aerospaziale, Università di Roma "La Sapienza"

ABSTRACT

The present study describes the physical bases of homeopathy and of the "memory of water". We critically discuss first the current physical/chemical theories based on classical mechanics, quantum mechanics, quantum electrodynamics and on the Complexity Theory. We later point out some characteristic changes produced by the homeopathic treatment in water, such as the inversion of the active principle (Arnoldt-Schultz Law) and of "Time's arrow". We then describe, at first in intuitive and phenomenologic terms, the mechanism of action of homeopathic medicines according to Severi-Pannaria-Cardella, also considering the effect of homeopathic medicines, at ultra high dilutions, on specifically psychic diseases. Finally we offer a synthesis of Severi-Pannaria physical theory on which the previous arguments are based with reference to Pure Matter, Combined Matter, particle and anti-particle.
